BUILDING MATERIALS TESTER (M/F/D)

Information about apprenticeship

The logo consists of the word "STREICHER" in white, bold, uppercase letters, centered within a red square. The square is partially overlaid by a white circular graphic element that resembles a stylized 'C' or a partial ring.

The vocational training at a glance

Tasks

Building material testers examine building materials in the fields of asphalt, concrete, geotechnics and minerals. Furthermore, they supervise construction sites, asphalt mixing and gravel plants. In laboratories they learn how to deal with different devices and make experiments, which are subsequently documented and analysed. The work at construction sites as well as in the laboratory and office work provide a varied field of tasks.

Skills

Sense of responsibility and accuracy are important for a precise examination of subsoils and building materials. An independent way of working and a confident appearance towards clients and colleagues are substantial. Skills in physics, chemistry and mathematics are also important in order to determine parameters and for calculations. Beyond that, MS-Office knowledge and manual skills are necessary.

Training Period

The **training period is 3 years** and takes place dual in the training company and at the vocational school in Selb, Germany.

Qualification

GCSE is required.

Location

The vocational training as building materials tester takes place at our **location in Deggendorf, Jena and Oelsnitz/Vogtland.**
