

Headquarters MAX STREICHER GmbH & Co. KG aA, Deggendorf

STREICHER Group

With a history of more than 100 years, the STREICHER Group understands how to combine quality and specialised knowledge with many years of experience in the competence fields pipeline and plant construction, mechanical engineering, civil and structural engineering as well as raw and construction material. MAX STREICHER GmbH & Co. KG aA – the parent company, with its headquarters in Deggendorf, employs more than 3,500 people worldwide.

Innovation and investments made in future oriented technologies ensure a constant development of the business activities and guarantee a long-term performance of the STREICHER Group.

- Recognised vocational training in accordance with the German Vocational Training Act (BBiG)
- Vocational training within the company, the vocational school and training centers

CONCRETOR (M/F/D)

Information about apprenticeship

**STREICHER**

The vocational training at a glance

Tasks

Concretors build concrete and reinforced concrete constructions, e.g. for bridge constructions or hall and skyscraper constructions. They install or fabricate formworks and scaffoldings, bend steel reinforcements and integrate those reinforcements into the formworks. They prepare concrete mixes or process ready-mixed concrete. The liquid concrete is brought into the formworks and compacted by tamping and vibrating. When the concrete is hardened, the concretors remove the formworks and if necessary, they work on the concrete surface. They assemble concrete components, seal concrete structures and insulate them. Furthermore, they repair concrete component damages.

Skills

The calculation of demand for building materials, the calculation of surfaces and the drawing up of the required measurements require good mathematical skills. Experience in the fields of crafts and technology make working with tools, machinery and devices easier. Beyond that, technical drawing skills are helpful when reading plans and drafts. Physical knowledge is necessary in order to be able to calculate the characteristics of the material and to estimate the impact of forces properly.

Training Period

The **training period is 3 years** and takes place in the company, the vocational school and in training centers.

Qualification

CSE is required.

Location

The vocational training as concretor takes place at our **locations in Deggendorf and Jena.**
