STREICHER

- Recognised vocational training in accordance with the German Crafts Code (HwO)
- Vocational training within the company, the vocational school and training centers

ELECTRONIC TECHNICIAN, BRANCH OF INDUSTRIAL ENGINEERING (M/F/D)

Information about apprenticeship

The vocational training at a glance

Tasks

Electronic technicians specialised in industrial engineering install electrical components and equipment in the area of electrical energy supply, industrial plants or modern building systems and automation technology. The equipment gets serviced and maintained on a regular basis, as well as modernised and repaired in case of a fault. Electronic technicians also install cable routing systems, power and information lines as well as the electrical equipment of machinery with the corresponding automation systems. They program, configure and test systems and safety devices. They organise the assembly of equipment and supervise the work of service providers and other trades. When commissioning the systems, electronic technicians specialised in industrial engineering instruct users in the operation of the systems.

Skills

Interest in mathematics is essential for the calculation of electrical parameters. Knowledge in crafts and technology is helpful for the assembly and disassembly of devices in electric control cabinets. Experience in technical drawing is of advantage for the preparation of project plans. Skills in information technology facilitate the access to programming and computer-based work processes.

Training Period

The **training period is 3.5 years** and takes place in the company, the vocational school and in training centers.

Qualification

CSE is required.

Location

The vocational training as electronic technician, specialised in industrial engineering takes place at our **location in Jena**.
