Innovation and investments made in future oriented technologies ensure a constant development of the business activities and guarantee a long-term performance of the STREICHER Group.

- Recognised vocational training in accordance with the German Vocational Training Act (BBiG)
- Vocational training within the company and the vocational school

INDUSTRIAL MECHANIC (M/F/D)

Information about apprenticeship

The vocational training at a glance

Tasks

Industrial mechanics ensure the operational availability of machinery and manufacturing plants. They fabricate device parts, machine components and assembly groups and mount them to machinery and technical systems. Following, they set them up, operate them and control their functionality. Furthermore, the service and maintenance of the plants belong also to their tasks. Industrial mechanics determine cause of faults, order the appropriate spare parts or fabricate these themselves and carry out repairs. After the completion of assembly and functionality tests, they instruct colleagues and clients in the operation and control of the machinery and plants.

Skills

Mathematical knowledge is required as industrial mechanics have to convert values from tables or calculate length, angles or volumes for the fabrication of spare parts. Knowledge in physics is also important in order to understand the use of machinery and manufacturing plants as well as the basics of the electronic and control technology. Furthermore, skills in informatics facilitate the work with computerised machinery.

Training Period

The **training period is 3.5 years** and takes place in the company and the vocational school.

Qualification

CSE is required.

Location

The vocational training as industrial mechanic takes place at our **locations in Deggendorf and Gommern.**
