

Headquarters MAX STREICHER GmbH & Co. KG aA, Deggendorf

STREICHER Group

With a history of more than 100 years, the STREICHER Group understands how to combine quality and specialised knowledge with many years of experience in the competence fields pipeline and plant construction, mechanical engineering, civil and structural engineering as well as raw and construction material. MAX STREICHER GmbH & Co. KG aA – the parent company, with its headquarters in Deggendorf, employs more than 3,500 people worldwide.

Innovation and investments made in future oriented technologies ensure a constant development of the business activities and guarantee a long-term performance of the STREICHER Group.

- Recognised vocational training in accordance with the German Vocational Training Act (BBiG)
- Vocational training within the company, the vocational school and training centers

CONSTRUCTION MECHANIC, BRANCH OF EQUIPMENT TECHNOLOGY (M/F/D)

Information about apprenticeship

The vocational training at a glance

Tasks

Construction mechanics specialised in equipment technology fabricate metal and plastic components for construction machinery, cranes and handling systems, deliver and assemble them on site. Furthermore, construction mechanics build and maintain machines for construction sites and supply required staircases, safety barriers and banisters. In the workshops, they cut the single components into size either by hand or by machine, shape and bend the components and put them together with screws or welded seams. When assembling, they construct hydraulic and pneumatic systems according to circuit diagrams and for example control the function of elevators. Later on, construction mechanics maintain and repair devices and carry out reconstructions according to customer requirements.

Skills

Mathematical knowledge is required as construction mechanics have to calculate for instance the material requirements, lengths, surfaces and angles on metal construction. Knowledge in physics is also important in order to be able to estimate characteristics of structures. When using milling, drilling and cutting machines, it is advantageous to have craft and technical knowledge. Technical drawing skills facilitate the reading and drawing up of accurate drafts and plans.

Training Period

The **training period is 3.5 years** and takes place in the company, the vocational school and in training centers.

Qualification

CSE is required.

Location

The vocational training as construction mechanic, branch of equipment technology takes place at our **location in Deggendorf**.
